

The Process Plugins™ Wind Turbine and Solar Array Forecasting solutions provide predicted output seven days into the future. Based upon weather forecast at the site location, generation capacity is predicted into the future. Curves are customized upon installation and can be easily adjusted anytime afterward. Internet access is required for an associated computer or the Analysis Framework server for weather inputs. Expected values calculations require the availability of appropriate curves (from the manufacturer or actual historical data).

The Process Plugins™ Wind Turbine and Solar Array Forecasting solutions are currently under development and will be completed in the near future. If you have an immediate need for a detailed description or need to know the status of testing and availability of any of the Process Plugins™ Solutions, please contact us by one of the methods below. Thank you for your interest in the Process Plugins™ Solutions.
